

After consolidating a leading company in Colombia for the integration and development of Automatic Control and Industrial Instrumentation Systems, and achieving the representation and positioning of major brands for the industry such as SIEMENS and WEINTEK, among others, we have set ourselves the challenge of creating a subsidiary to expand our presence, starting in the Florida, United States market.

With the creation of new and dynamic production plants that combine Data Analytics, Industrial Internet of Things (IIoT), Cybersecurity, and people's safety, our goal is to become by 2030 an Industrial Automation company that drives and contributes to the advancement of Industry in the United States. We aim to combine innovative technological solutions with a deep respect for environmental sustainability and ethical practices, while also protecting the highly valued human resource.
