

**SITRANS F M, Electromagnetic Flowmeters** □ SITRANS F M flowmeters measure the volumetric flow of conductive fluids. They are used for measuring water, chemicals, food and beverage products, slurries, pulp, and mining sludges with magnetic particles. The electromagnetic measuring instruments of the SITRANS F M product range are available in three variants:

Standard flowmeter with pulsed direct current magnetic field.

SITRANS F M available in sizes from DN 2 to DN 2000.
